Getting to know your Znewtech Scale

Step-by-Step Assembly Instructions

Parts Listing:

A

Scale Base (1 Unit)

B

Stand poles (2 Units)

C

Display (1 Unit)

D

Pole Connector (1 Unit)

E

Screws (6 Units)

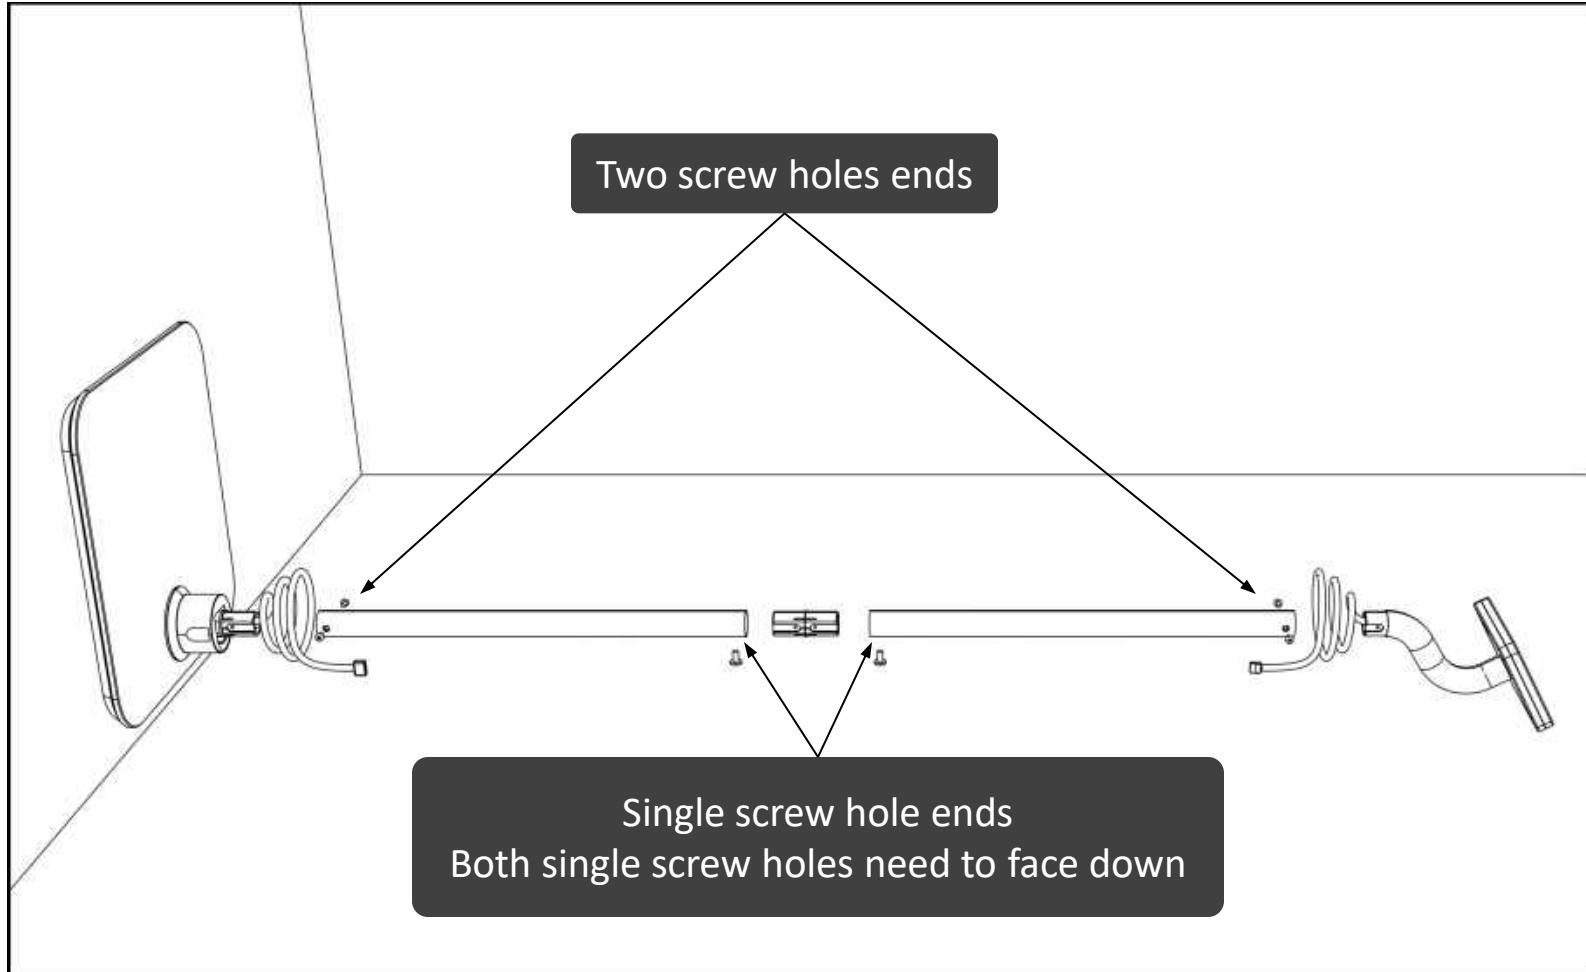

Required Tool:

Philips screwdriver (not included)

Assembly will take 10-20 minutes

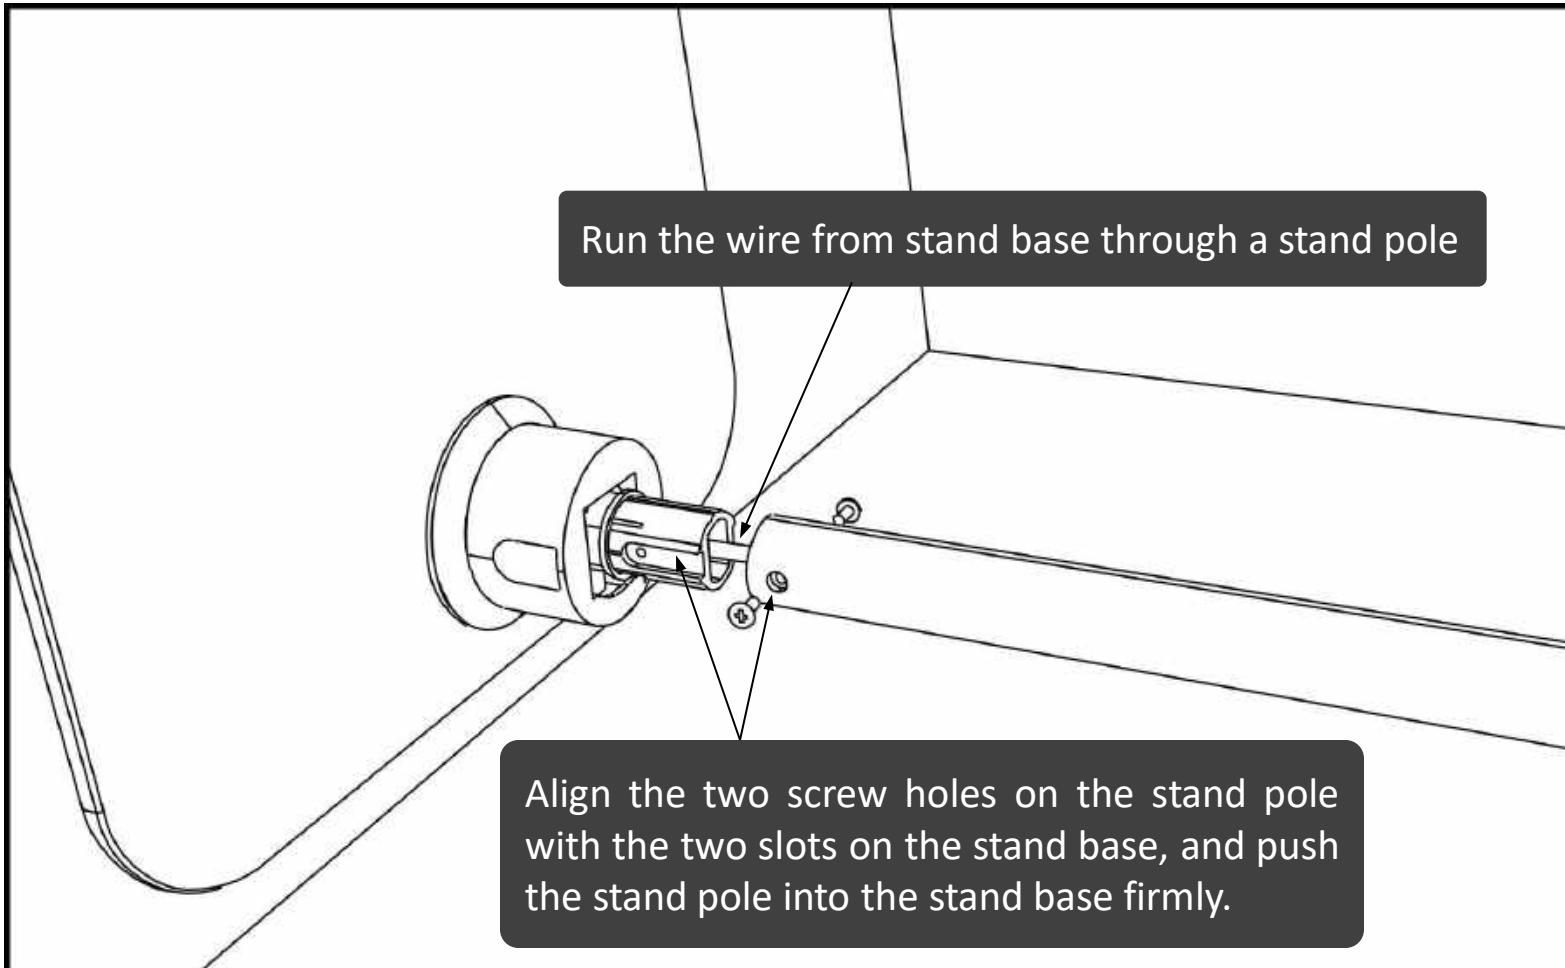

1

Lay down all the parts on the floor as shown below

2

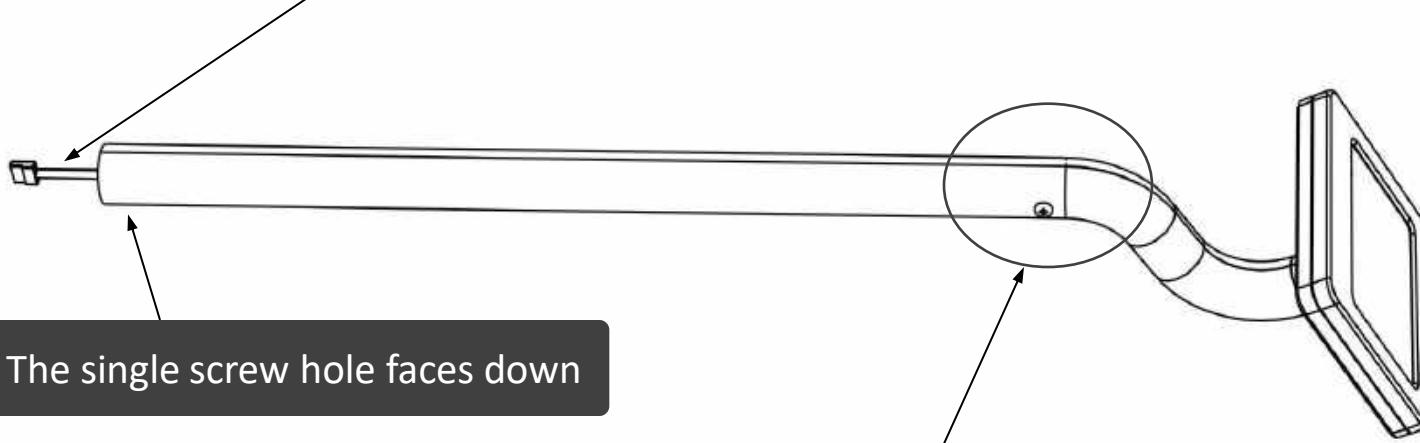

Connect a stand pole with the stand base

3

Connect a stand pole with the scale display

Run the wire from scale display through a stand pole

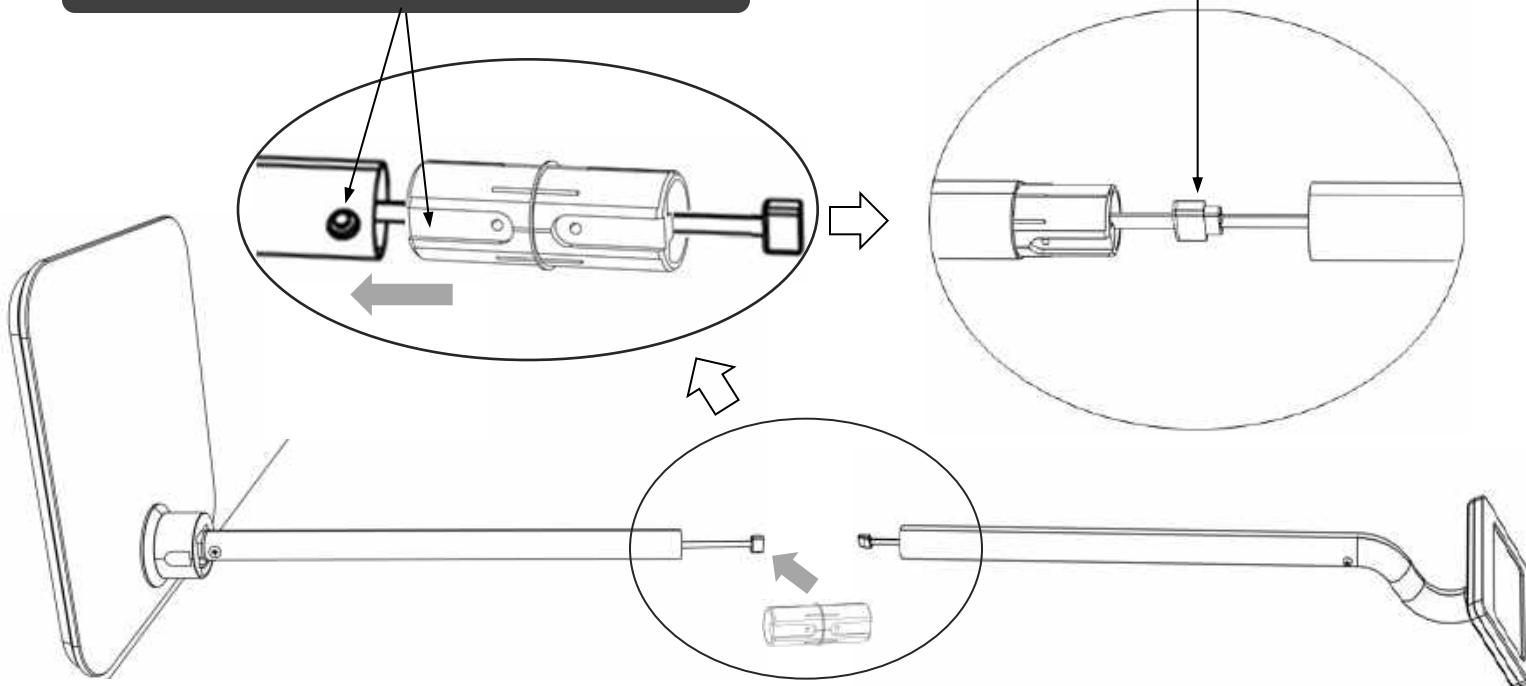

The single screw hole faces down

Align the two screw holes on the stand pole with the two slots on the display, and push the stand pole into the display firmly.

4

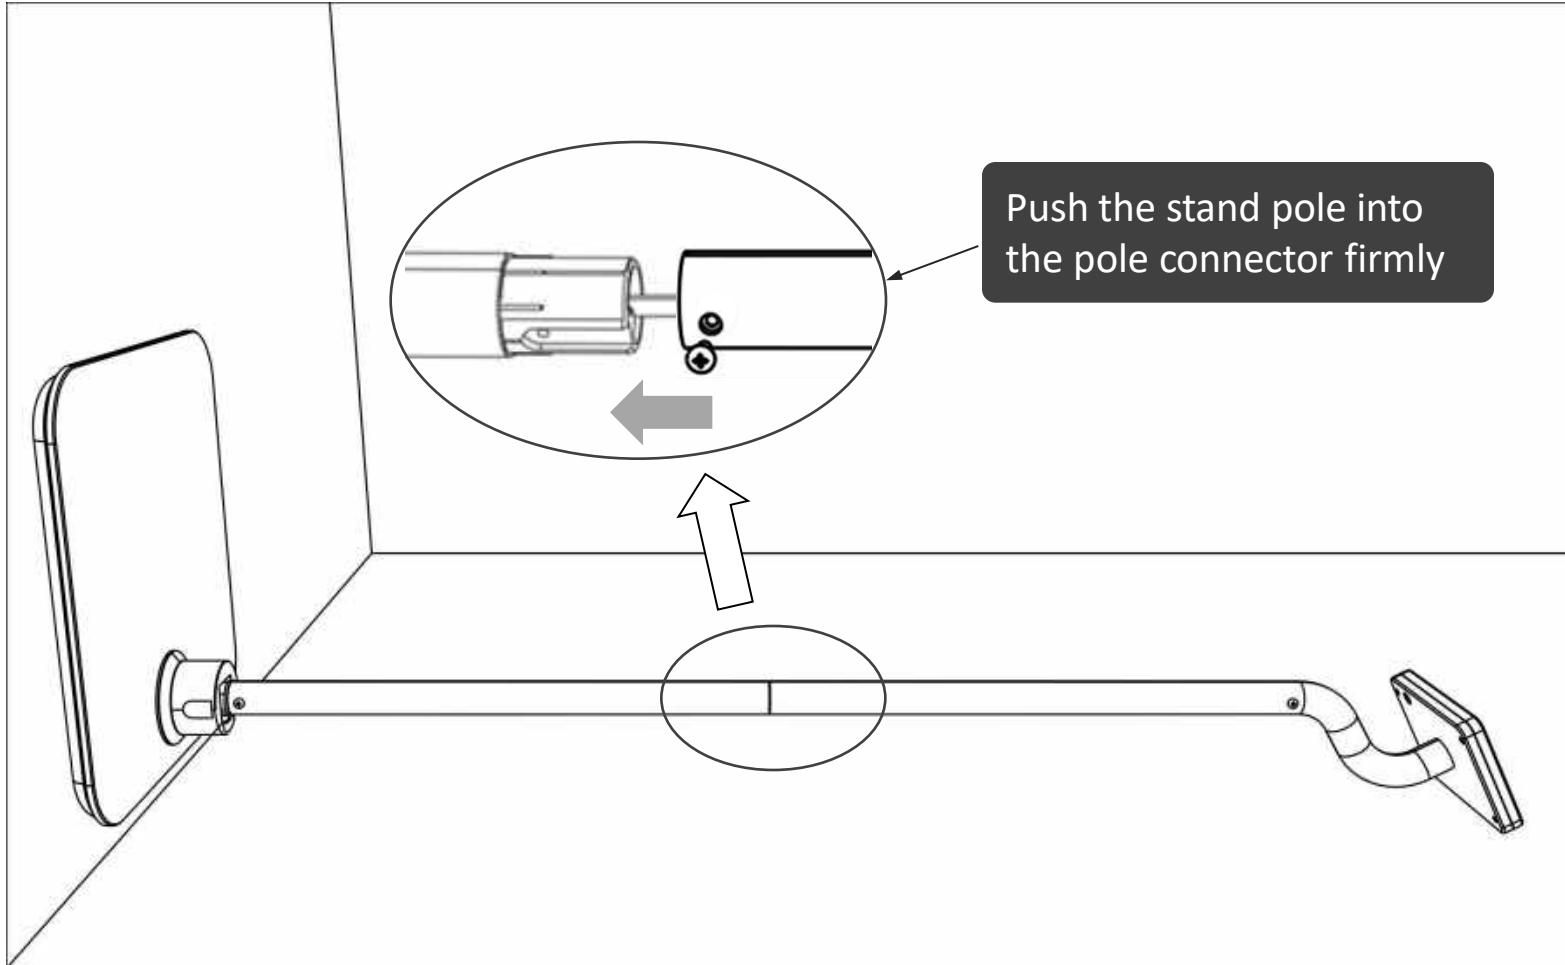

Insert the pole connector and connect two wires

Align the slot on the pole connector with the screw hole on the stand pole , and push the pole connector into the stand pole firmly

5

Connect two stand poles together

6

Install batteries

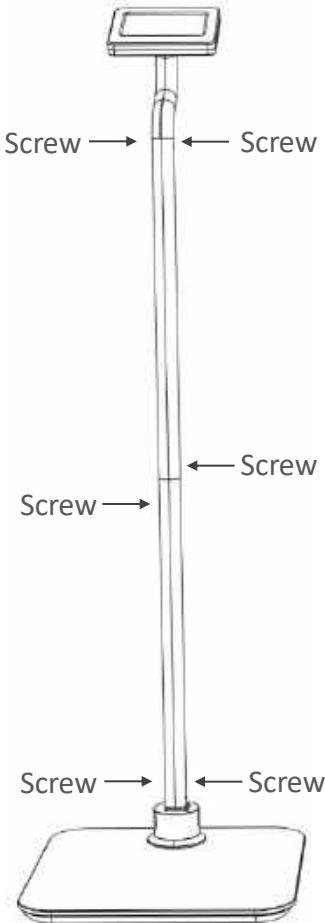

Install 4 AAA batteries into the battery compartment on the bottom of scale platform

7

Finish assembly

Hold up the scale to stand-up position and fasten all 6 screws

Use the scale on a hard, level and even surface (no carpeting). Inconsistent and soft surfaces will cause inaccurate measurements.

Troubleshooting

How to reset the scale?

- 1) Uninstall batteries
- 2) Wait for one hour
- 3) Reinstall batteries

Setting Units

1. Press the **Unit Set Switch** located on the back of the scale **LCD Display** to select the unit (kg/lb/st) that you want to set. The stone (st) is a unit of measure equal to 14 pounds (lb) avoirdupois, or 6.3503 kilograms (kg).
2. The unit changes each time the set switch is pressed.

Unit Set Switch

Measuring Your Weight

1. Place the scale on the **hard and flat** surface.
2. Step on the **scale platform**, the scale **stand pole** can be tilted forward up to **15°**. Remain still and the scale will count up to your weight. The display will **flash twice** when the weight is locked.
3. Your weight will be displayed for about **10 seconds**, and then the scale turns off automatically.

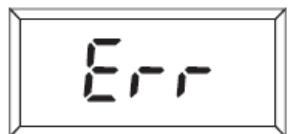

Maintenance

The “**LO**” indicates the battery power is low. Please change new batteries.

The “**Err**” indicates overload.
